Standardized treatment effect ^c								
Biometric outcomes			-0.00 (-0.05 to 0.04)	0.83		-0.00 (-0.12 to 0.11)	0.96	

^a This table reports interaction effects for the effect of the wellness program. For reference, the table also includes the group means and effects of program eligibility from Table 3 reported in the main text. All outcome variables were obtained during the on-site screening in either 2017 (12-month follow-up) or 2018 (24-month follow-up).

b Adjusted P values account for the 32 hypotheses tested in this domain.

C The standardized treatment effect gives equal weight to each outcome within a domain and includes both the 2017 and 2018 outcomes. It excludes height, BMI, total cholesterol, LDL cholesterol, and the four binary measures.
